

# Business Unit Profile

[whitelab.it](http://whitelab.it)

# We test for quality. We stand for trust.

**Whitelab is a leading Italian Group in testing and compliance services.**

Whitelab is the largest Italian network of laboratories specialised in testing, compliance and technical consulting services. Thanks to multidisciplinary skills, advanced technologies and a widespread presence in the area, we support companies, public bodies and organisations along the path of compliance, quality and sustainability.

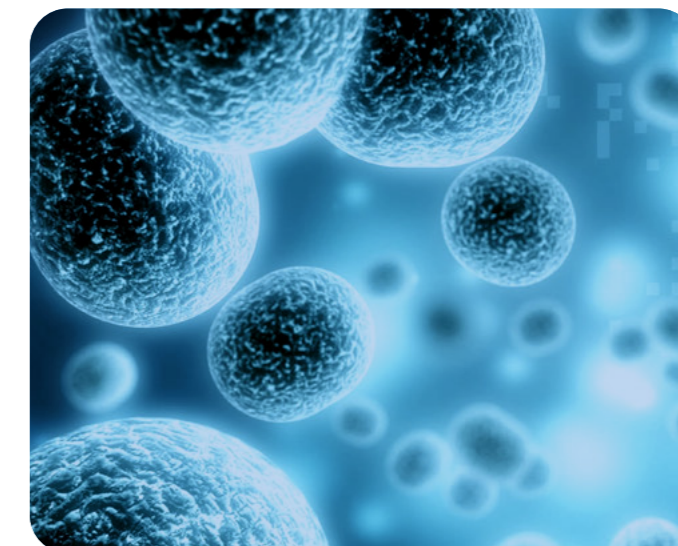

To best serve our reference sectors, **Whitelab has organised its activities into four specialised Business Units**, each dedicated to specific market areas. This strategic division guarantees a more efficient service, with sector experts, simplified processes and a more personalised offer that is closer to the real needs of our clients.

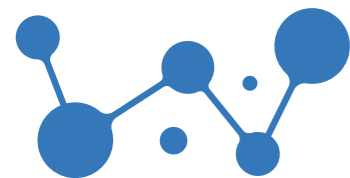

**Widespread presence in Italy, 10 regions and over 20 operating locations.**

## Our business units

To best serve our reference sectors, Whitelab has organised its activities into four specialised Business Units, each dedicated to specific market areas. This strategic division guarantees a more efficient service, with sector experts, simplified processes and a more personalised offer that is closer to the real needs of our clients.

LIFE SCIENCE

The Life Science Business Unit is the centre of excellence dedicated to testing, validation and compliance services for the biomedical, pharmaceutical, consumer goods and food contact materials sectors.

Through an integrated approach and a strong focus on quality, the BU supports companies in developing safe, reliable products that comply with the main international standards.

Thanks to state-of-the-art laboratories and a team of specialists with multidisciplinary skills, the Life Science Business Unit offers a complete portfolio of tests and analyses covering the entire product life cycle – from design to certification and placing on the market.

With a vision oriented towards innovation and sustainability, the Life Science Business Unit positions itself as a strategic partner for companies operating in the health, care and wellness sectors, offering customised solutions to achieve the highest standards of safety and regulatory compliance.

# Our sectors

The services of the Life Sciences BU are aimed at a wide range of organisations that must ensure regulatory compliance and health protection:

---

## Medical devices

Chemical, biological and toxicological evaluations according to ISO 10993, FDA guidelines on biocompatibility and ASTM standards, to ensure the safety of materials in contact with the human body.

---

## Pharmaceutical and biomedical packaging

Stability studies, integrity verification, sterility testing, mechanical strength evaluation and transport validation in accordance with current regulations and GMP guidelines. All this, to ensure the protection and quality of the product throughout the distribution cycle.

---

## Electrical consumables, household and electromedical materials

In accordance with the regulations harmonised under the 2014 EU Directives for all electrical products falling within the scope and tests of electrical safety and electromagnetic compatibility and harmonised under the 2021 MDR for all electromedical devices.

---

## Compliance with the REACH Regulation and the RoHS Directive

Chemical analysis and conformity assessments for consumer products and electrical/electronic equipment according to Regulation 1907/2006 and Directive 2011/65/EU + Directive (EU) 2015/863, aimed at ensuring the absence of hazardous substances and compliance with European environmental directives.

- Preparation of safety data sheets and verification of compliance with Reg. 1907/2006 and CLP
- SCIP database notification and PCN notification
- REACH registration dossier

---

## Materials and articles in contact with food

Verification of the conformity of materials intended for food contact according to Regulation (EC) 1935/2004 and applicable national and international legislation. Analysis of materials in contact with water intended for human consumption pursuant to the “*Drinking Water*” Directive.

---

## Textile and leather

Chemical and physical analyses of skins, leather and fabrics carried out in accordance with current national, European and international regulations and standards. Our team of experts supports the client in complying with local, national and supranational regulations and supports them throughout the process of obtaining and maintaining the sector’s key certifications.

- Drafting and evaluation of specifications
- Consulting for obtaining and maintaining LWG certification
- Consultancy to verify product compliance with the standards developed by INDITEX
- MRSL ZDHC consulting for chemical suppliers and users
